

DEXUA

Way you feel

USER MANUAL

Please read the following instructions before you start using the Dexua Wallet!

STAR MINI WALLET

Leather Features

- Since the leather used is 100% genuine leather, its flexibility and ease of use will increase over time from the first use.
- Since the leather used in the product is 100% genuine and special, it will show natural variability over time as it is used.

Card protector function

The aluminium card protector protects your plastic cards from bending and breaking, as well as from unwanted RFID (Radio Frequency Identification) readers. RFID cards contain a chip and an antenna for wireless communication. Examples include debit and credit cards, as well as new generation ID, transport and access cards.

How to use a card protector?

A maximum of 7 cards can be carried in the card protector.

The latch in the lower left corner must be pulled to the down for the cards to come out in order. The cleaning of the card protector should be done by wiping softly with a slightly damp cloth and dried before use.

Keep in Mind!

In case of deterioration of the oscillation after use, change the card order, straighten the bent or deformed cards. Clean the dirt inside by shaking the card protector or wiping it gently with a slightly damp cloth.

- Since the leather used in the product is 100% genuine and special, it will show natural variability over time as it is used.
- The card holder is designed to fit standard plastic cards, smaller cards may fall out, larger cards may damage the assembly or cause the cards to get stuck in the holder.
- The card protector provides limited protection against strong magnets and is not suitable for paper business cards.

Each product is subjected to quality control before packaging.

When used correctly, Dexua Wallets will extend the Life of your Cards.

ISTANBUL WALLET

Leather Features

- Since the leather used is 100% genuine leather, its flexibility and ease of use will increase over time from the first use.
- Since the leather used in the product is 100% genuine and special, it will show natural variability over time as it is used.

Card protector function

The aluminium card protector protects your plastic cards from bending and breaking, as well as from unwanted RFID (Radio Frequency Identification) readers. RFID cards contain a chip and an antenna for wireless communication. Examples include debit and credit cards, as well as new generation ID, transport and access cards.

How to use a card protector?

A maximum of 6 cards can be carried in the card protector.

The latch at the bottom center of the card case must be swiped to the right to allow cards to come out in order. The cleaning of the card protector should be done by wiping softly with a slightly damp cloth and dried before use.

Cash and Coin Slots

Made with 100% alcantara leather lining, the cash slot has a capacity up to 8 banknotes.

The coin slot has a capacity up to 6 coins.

Keep in Mind!

In case of deterioration of the oscillation after use, change the card order, straighten the bent or deformed cards. Clean the dirt inside by shaking the card protector or wiping it gently with a slightly damp cloth.
